Highlights

- No agent has a valid incumbent simulant once the field's own simulants are in
- DFP displaces DMMP for sarin, soman and cyclosarin; CEES beats DCM for mustard
- Median 0 of 11 matched vs 5 for the field's own set; gap positive in 1000/1000
- Significance survives correction only when two pesticides are relabelled simulants
- DMMP and DPGME were designated for filtration and training, not for sensing
